3. What are the impacts on technology, roles and design choices?

# Strategic Planning Assumptions

By 2018, smart, governed, Hadoop-based, search-based and visual-based data discovery will converge in a single form of next-generation data discovery that will include self-service data preparation and natural-language generation. (Published in 2016. We are there.)

By 2020, augmented analytics — a paradigm that includes natural language query and narration, augmented data preparation, automated advanced analytics and visual-based data discovery capabilities — will be a dominant driver of new purchases of business intelligence, analytics and data science and machine learning platforms and of embedded analytics.

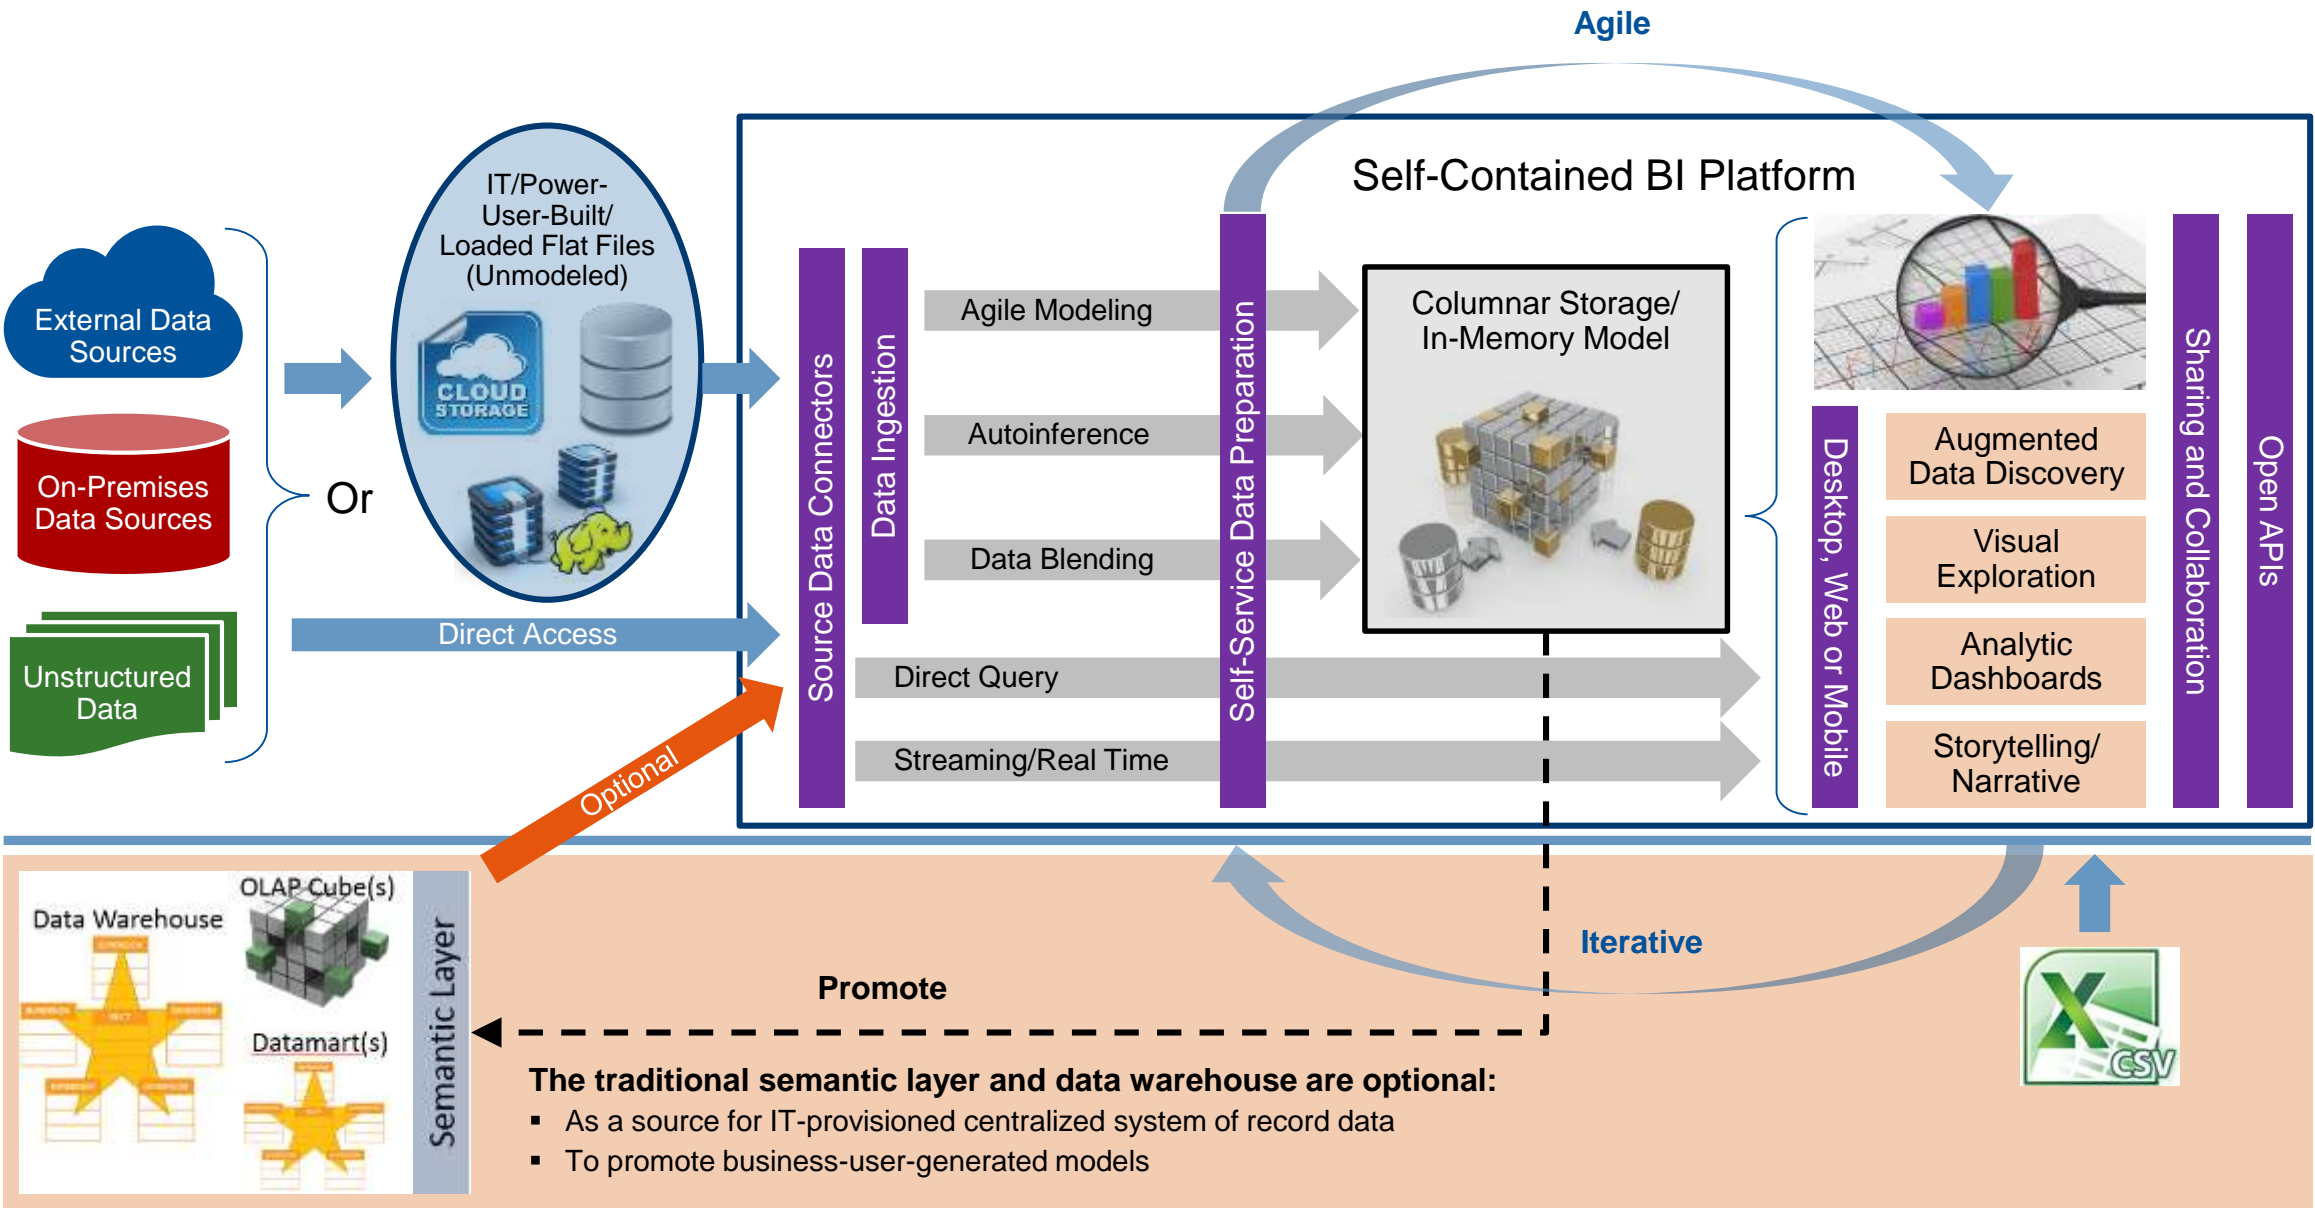

# Modern BI Platform Definition

A modern BI platform supports **IT-enabled** analytic content development.

It is defined by a **self-contained architecture** that enables **nontechnical** users to **autonomously** execute full-spectrum analytic workflows from data access, ingestion and preparation to interactive analysis and the collaborative sharing of insights.

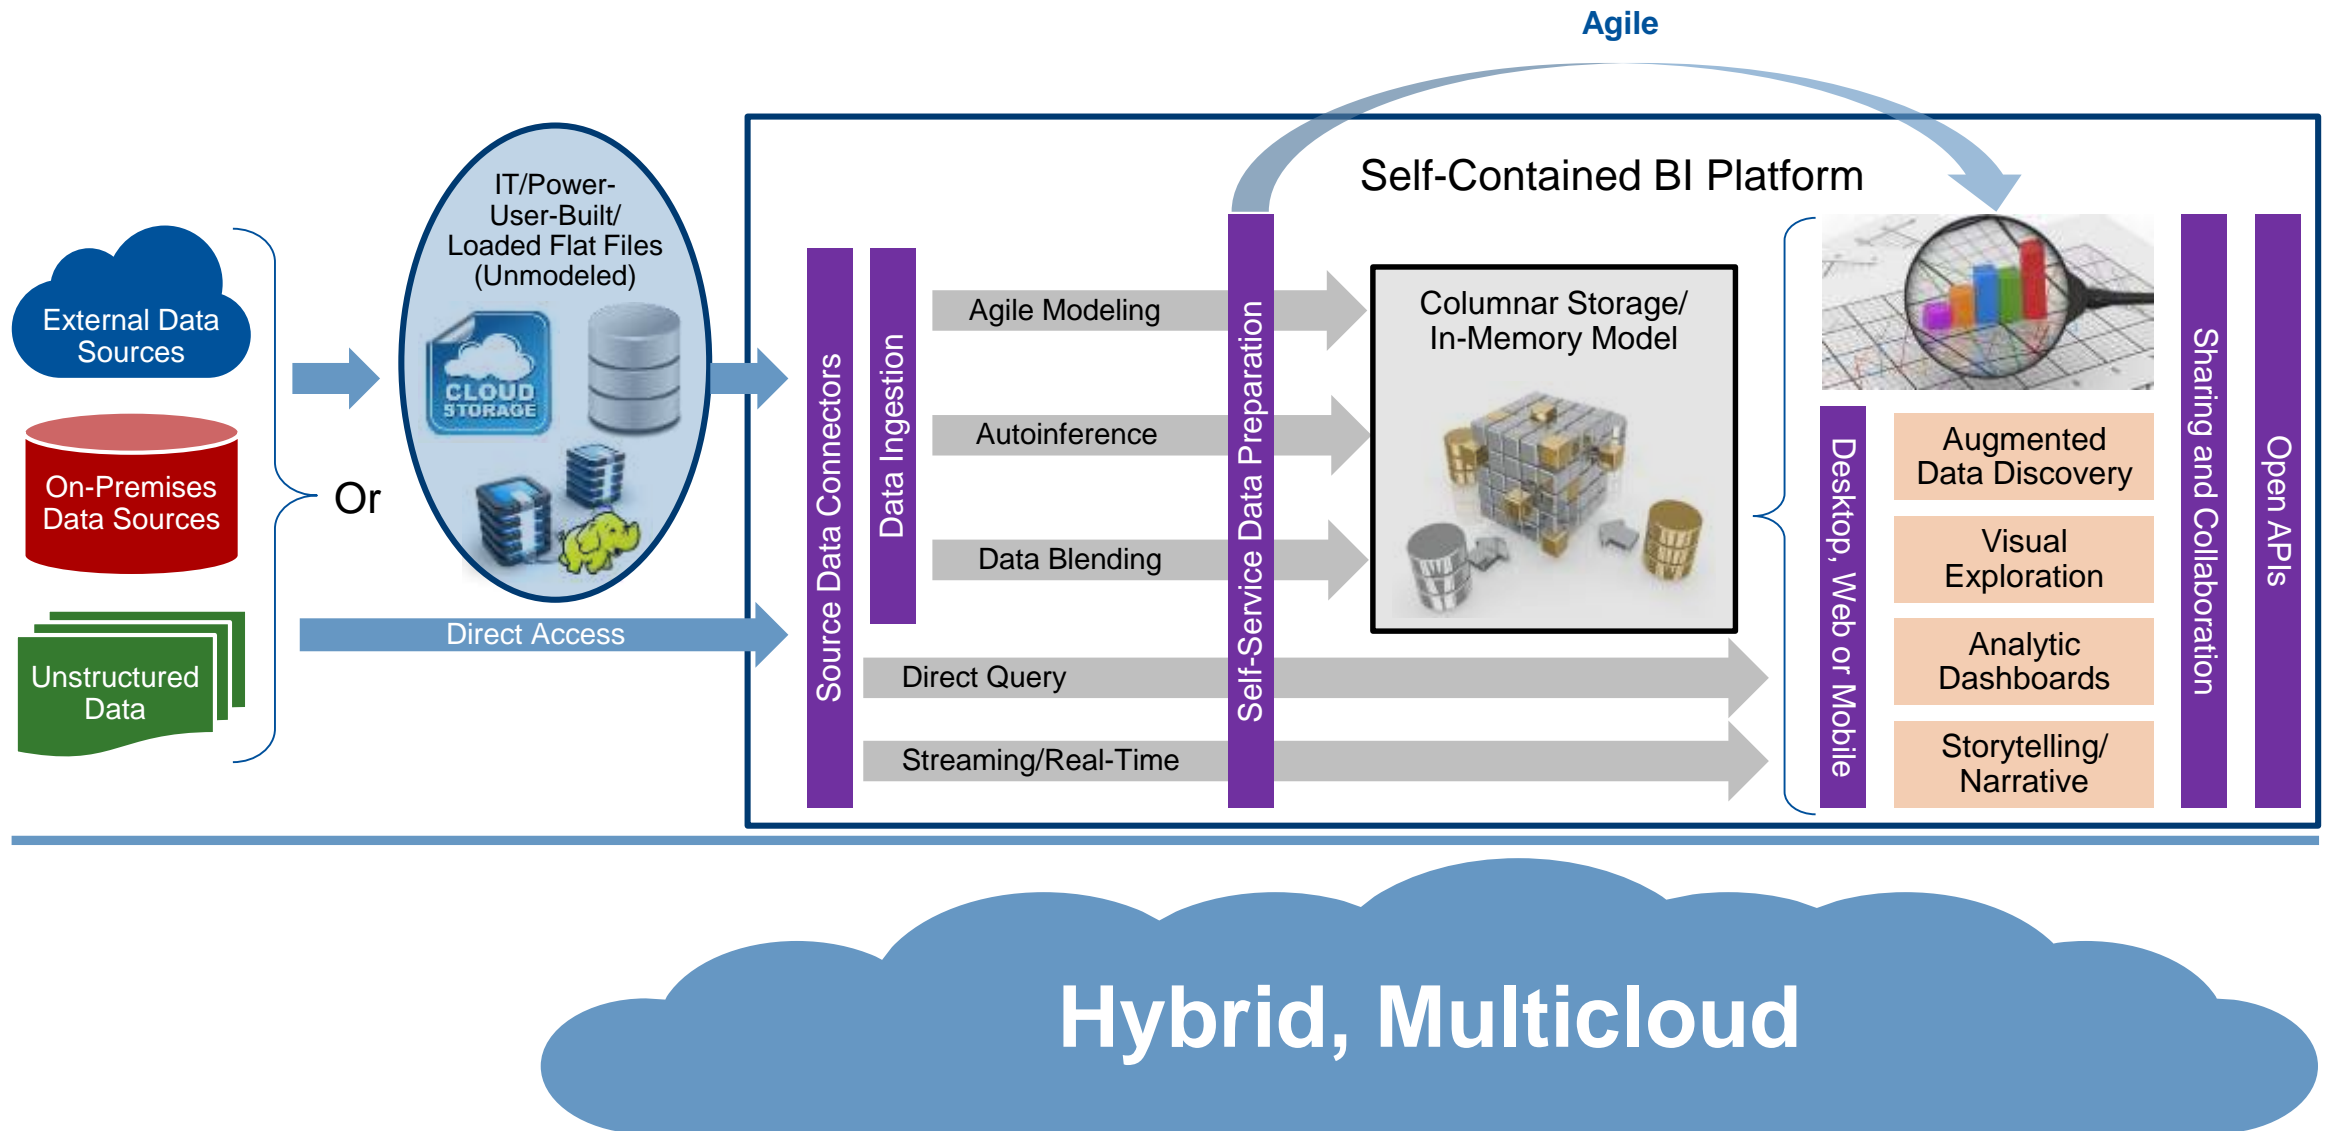

# Modern Analytics and BI

# Modern Analytics and BI: On-Premises, Cloud, Hybrid

Hybrid, Multicloud

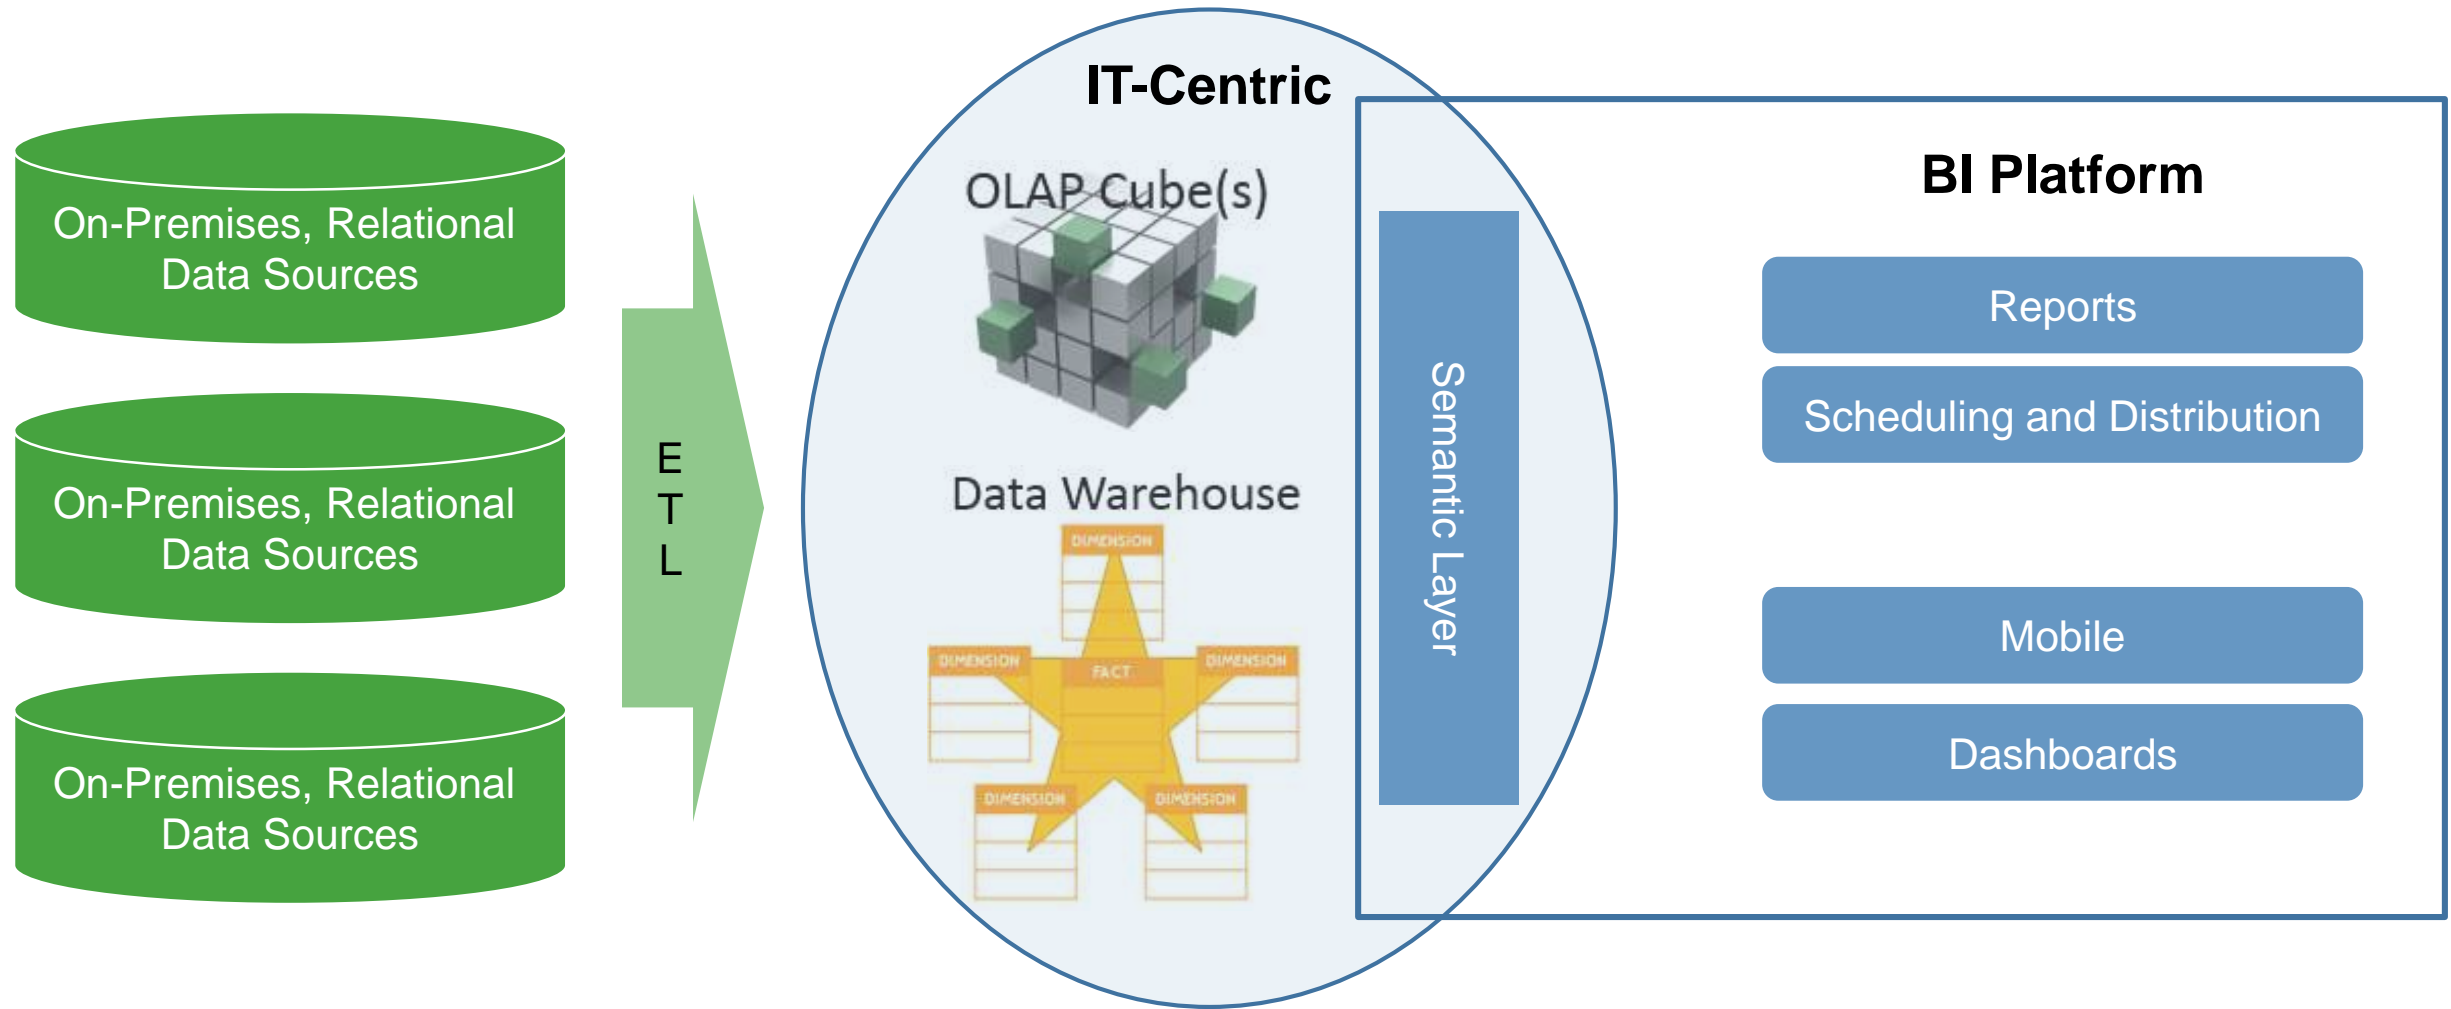

# Modern BI Platform Definition

A modern BI platform supports **IT-enabled** analytic content development.

It is defined by a **self-contained architecture** that enables **nontechnical** users to **autonomously** execute full-spectrum analytic workflows from data access, ingestion and preparation to interactive analysis and the collaborative sharing of insights.

By contrast, traditional BI platforms are designed to support modular development of **IT-produced** analytic content, specialized tools and skills and significant **upfront data modeling**, coupled with a **predefined metadata layer**, is required to access their analytic capabilities.

# Traditional BI Architecture: On-Premises

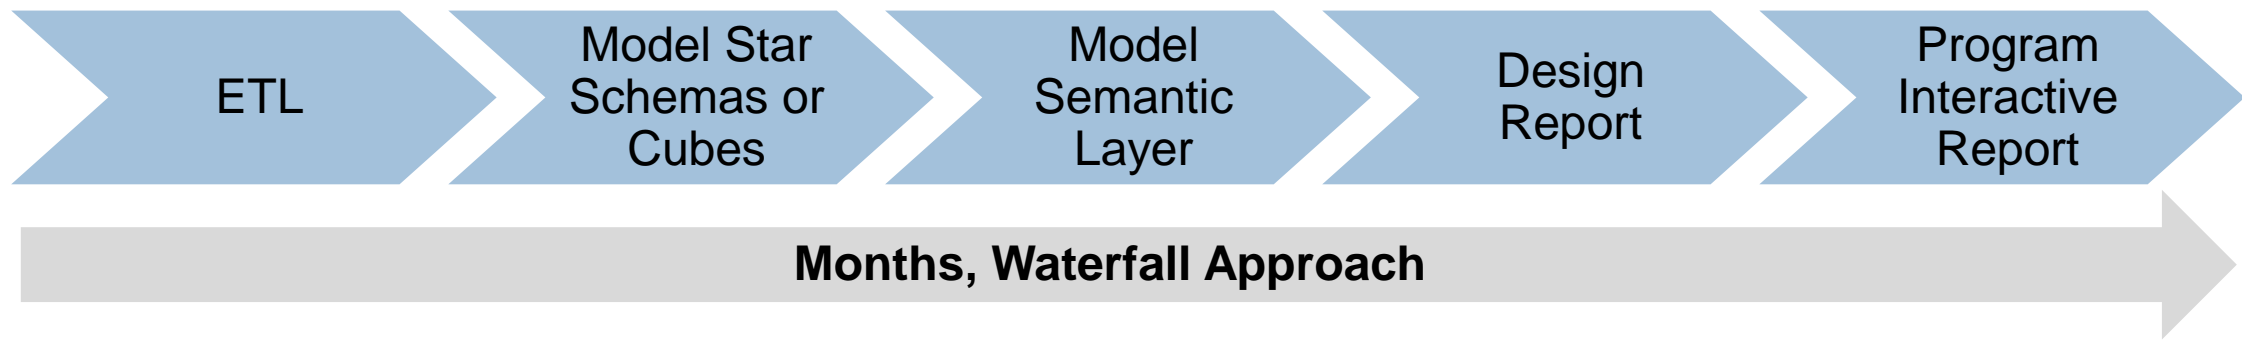

# Picture Your Current Traditional BI Platform

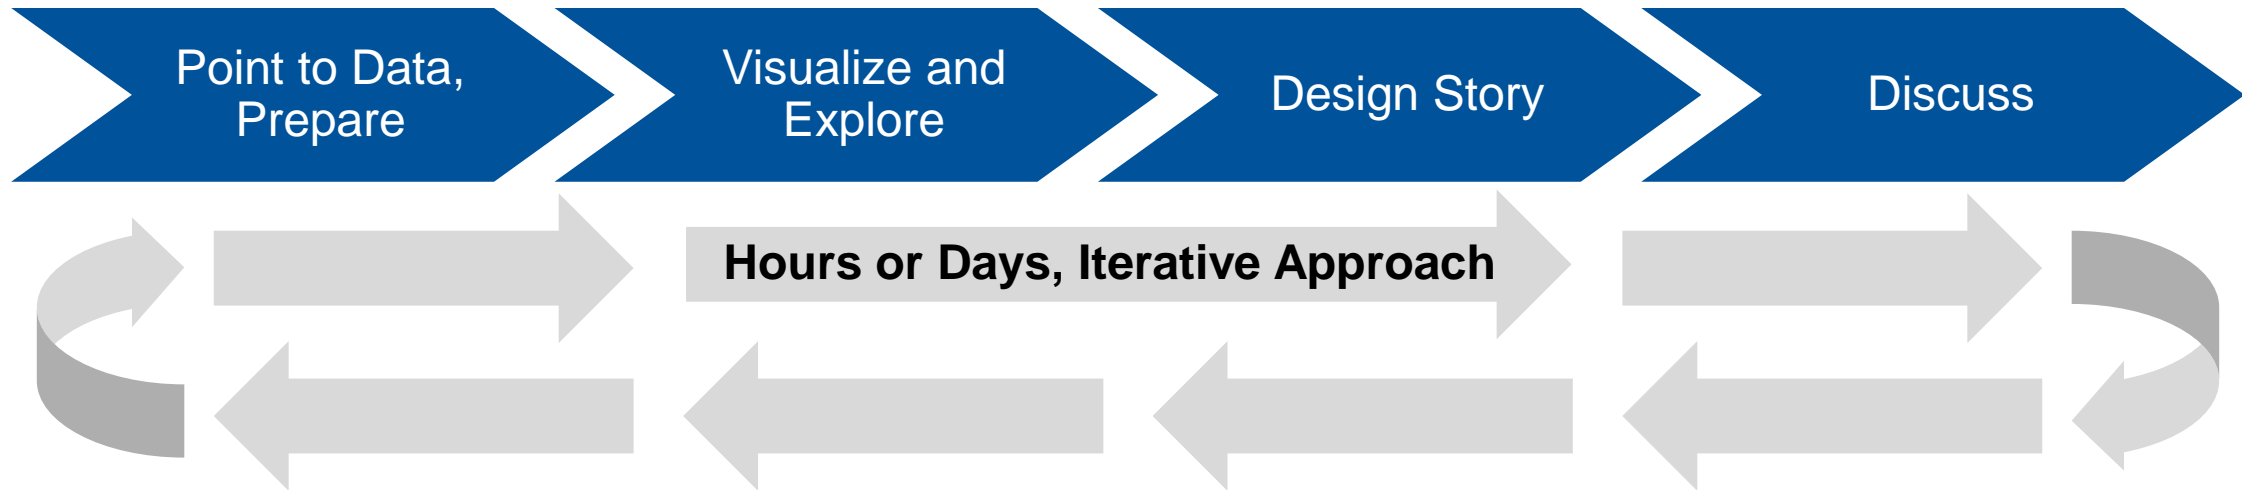

# Differences in Time to Market, Ease of Use, Business Benefits

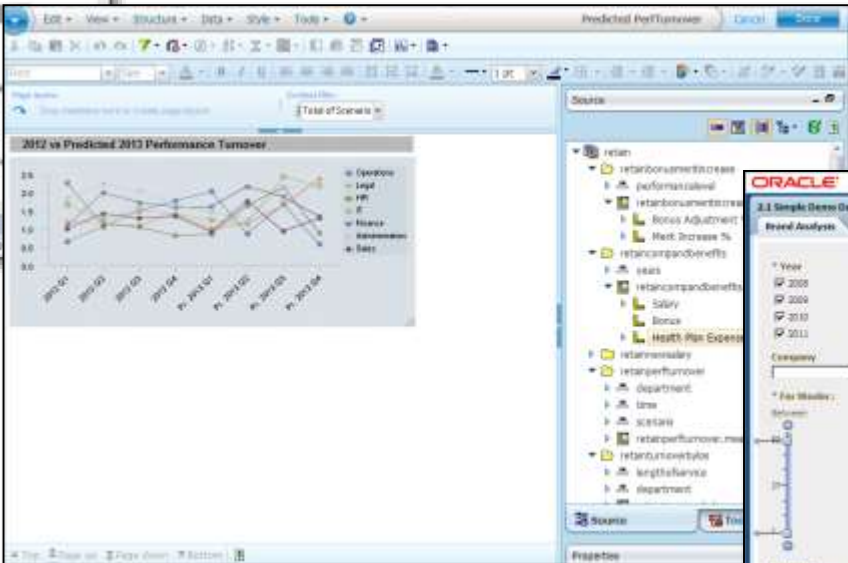

## Traditional BI

## Modern Analytics

# Examples of Leading Traditional BI Platforms

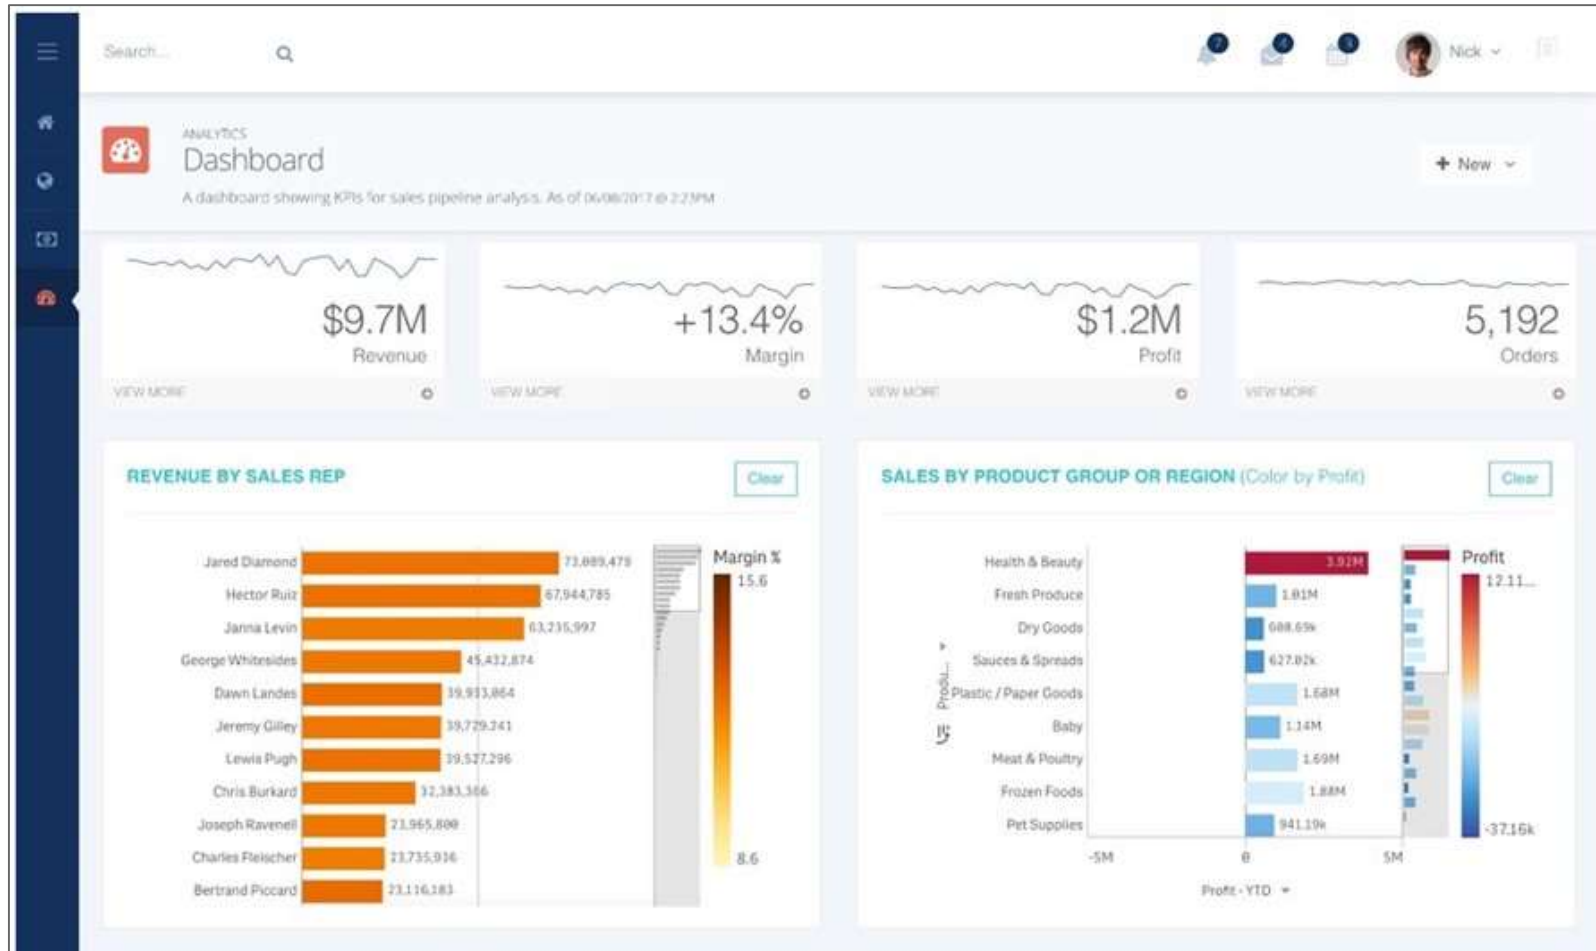

IBM Cognos 10

Oracle BI EE

SAP BusinessObjects Web Intelligence

# Contrast That With Modern Analytics and BI Interactive Dashboard Example With Qlik

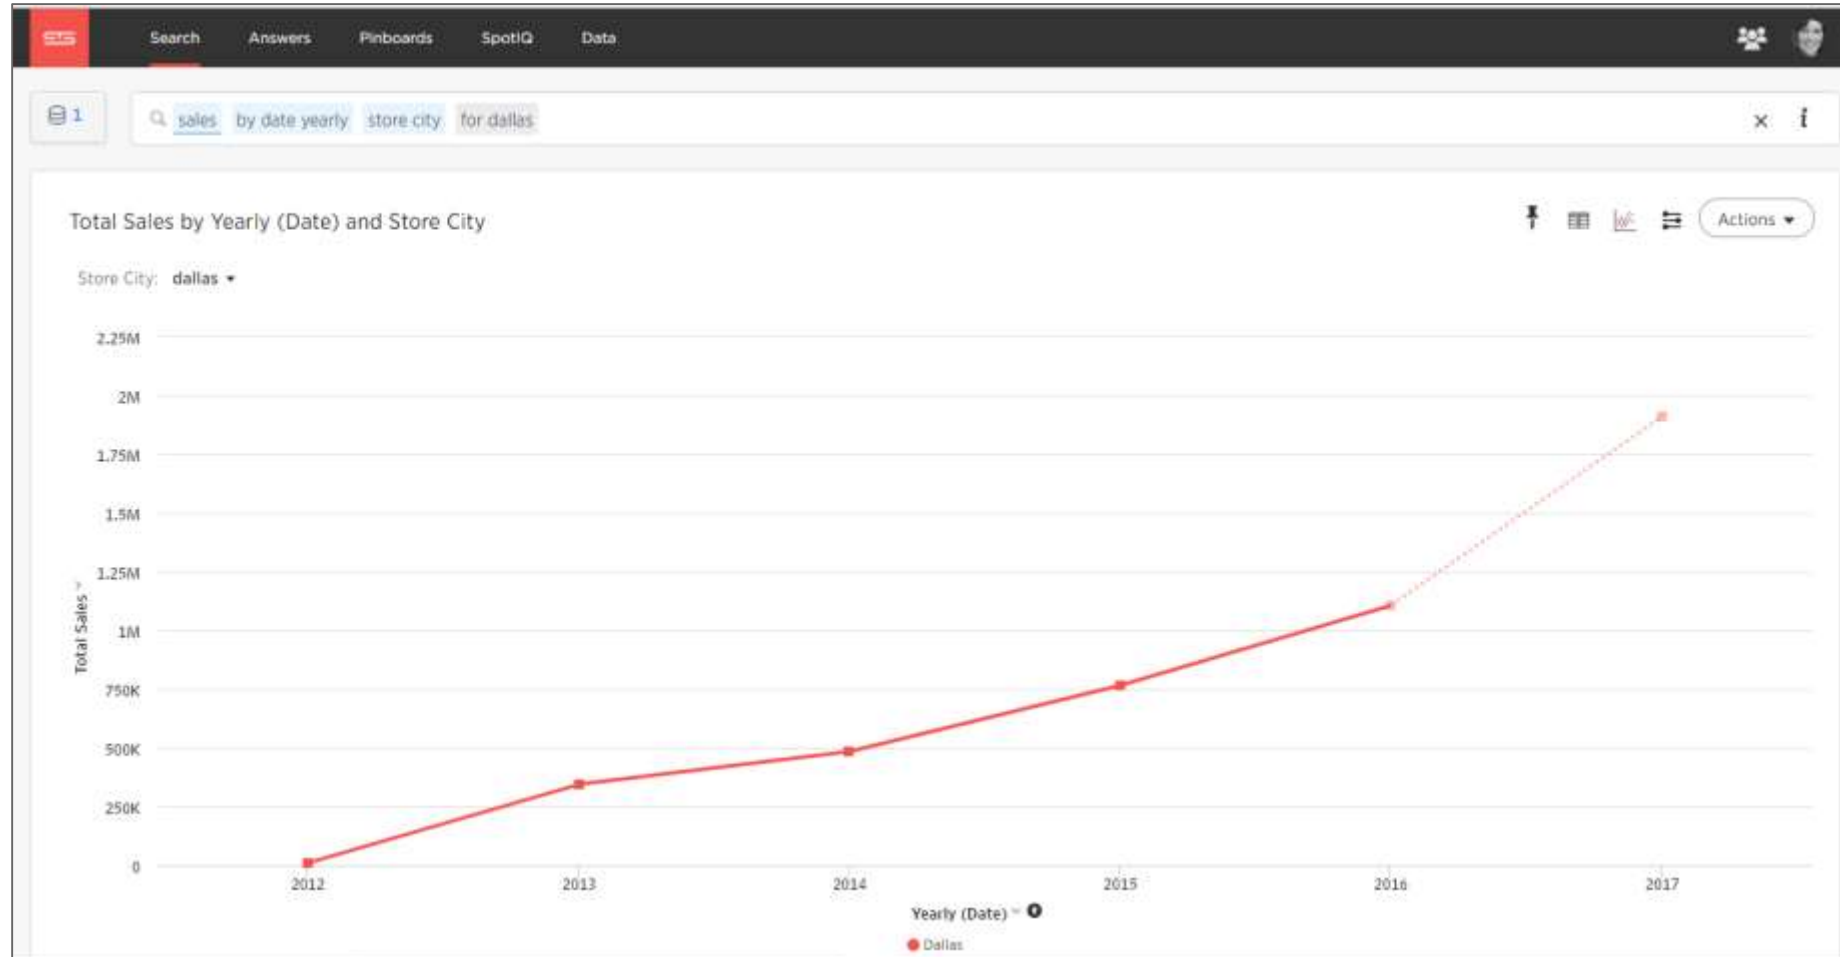

# Contrast That With Modern Analytics and BI Dashboard With Discussions Example With Domo

# Contrast That With Modern Analytics and BI Search Example With ThoughtSpot

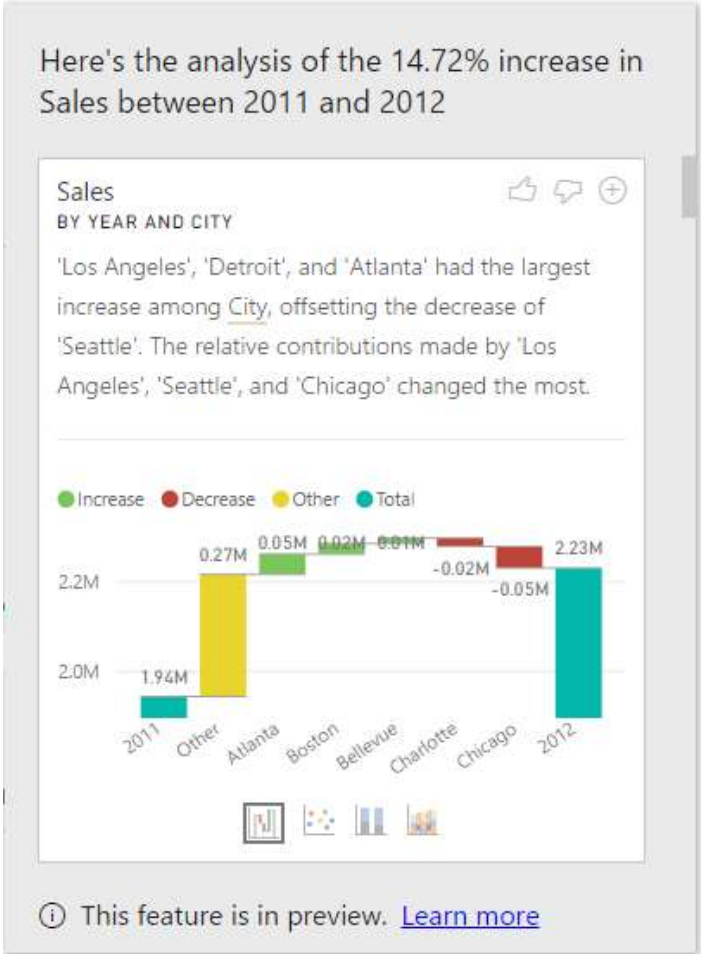

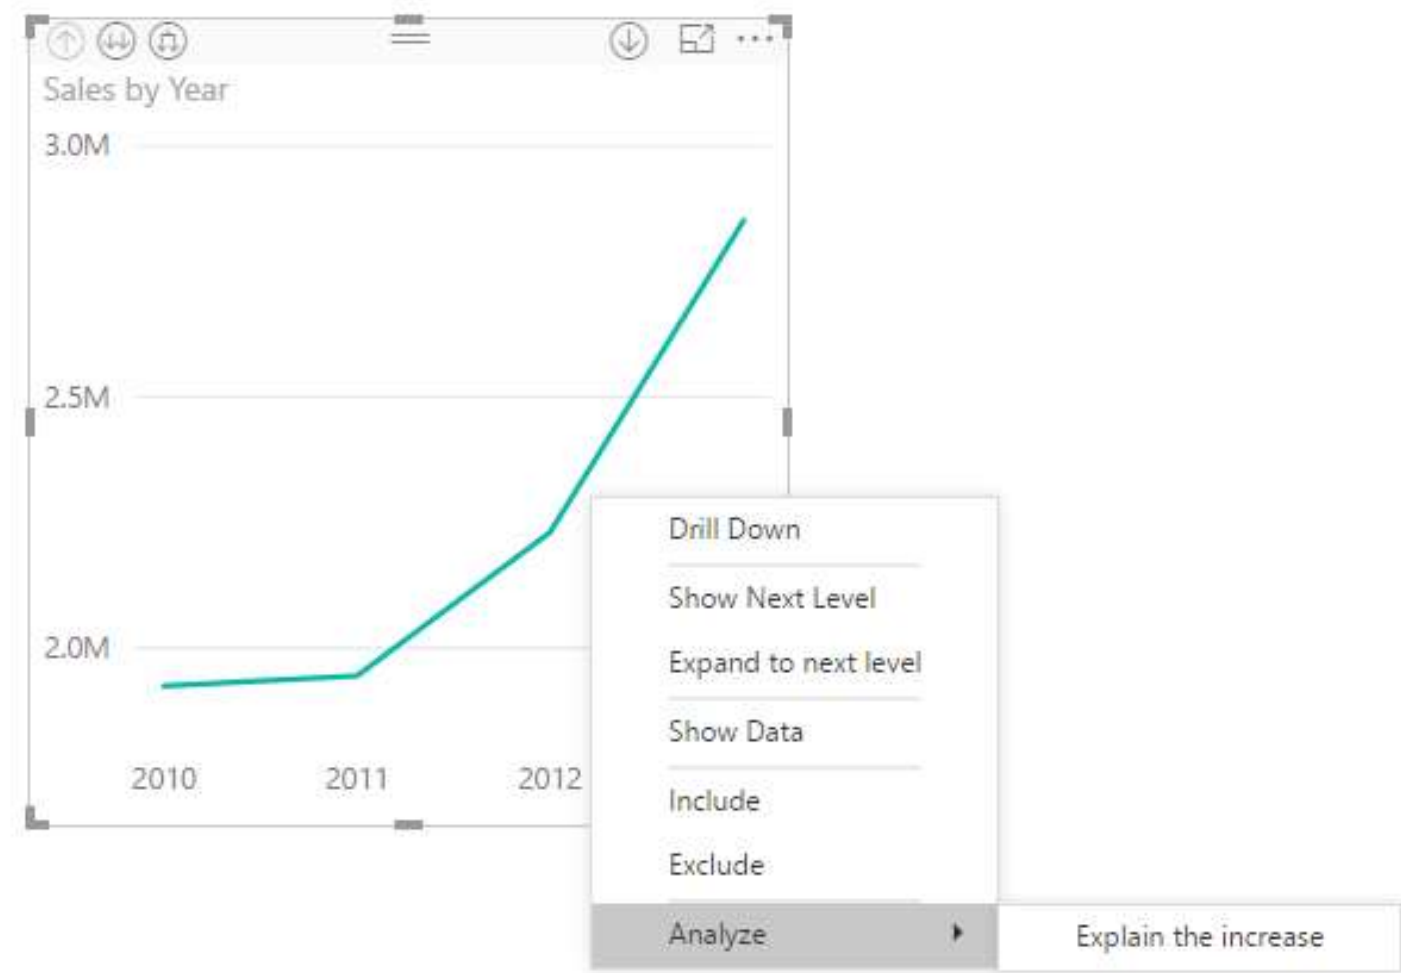

# Contrast That With Modern Analytics and BI Menu-Driven Clustering With Tableau Software

# Contrast That With Modern Analytics and BI

## Menu-Driven Variance Analysis With Microsoft Power BI

# Key Issues

1. How is modern analytics and BI different from traditional BI?
2. What are the market trends?
3. What are the impacts on technology, roles and design choices?

# Analytics and BI Market Transition Continues

# ITScore Self-Assessments: Degree of Having Modern ABI With Self-Service Data Discovery

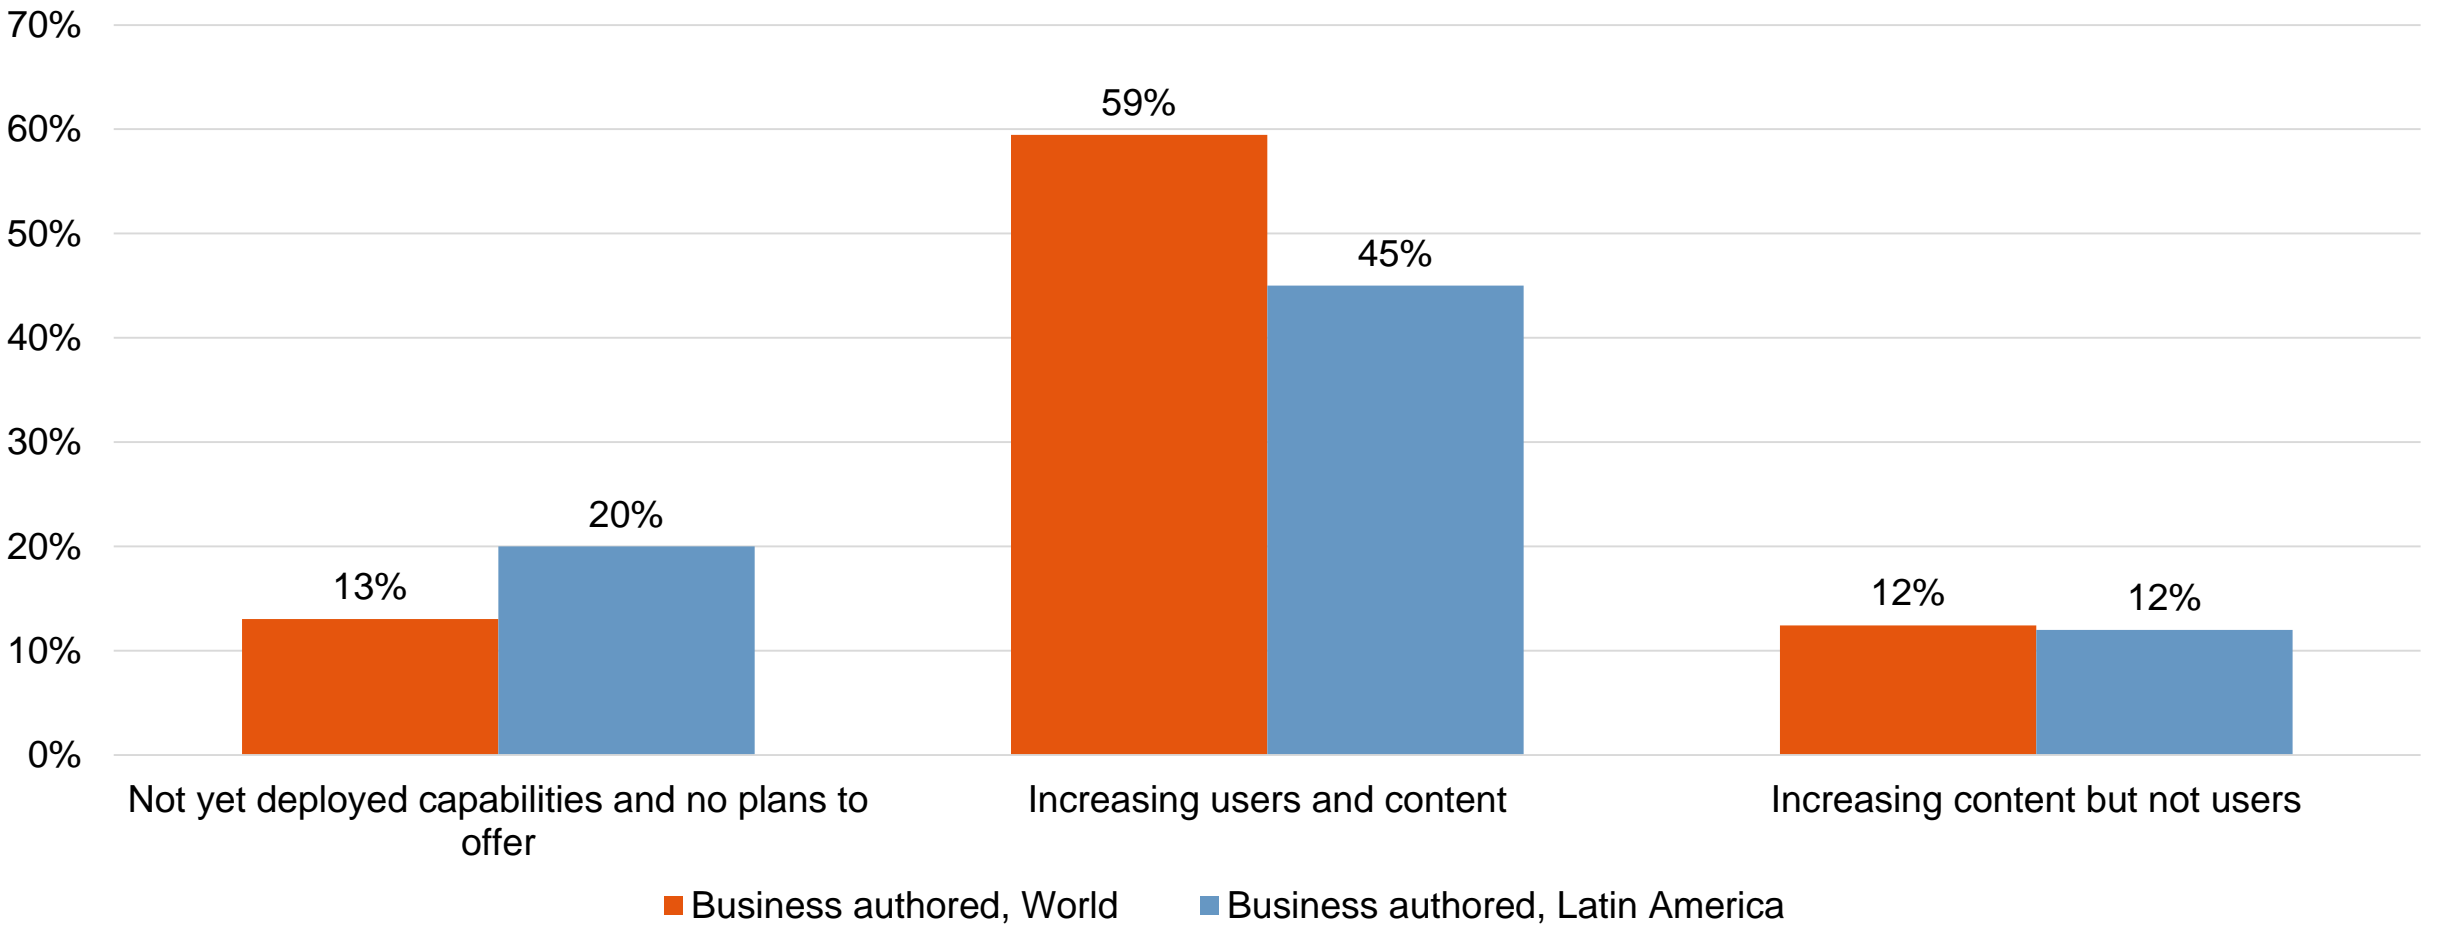

n = 691 ITScore Assessments, June 2016 to June 2017

# The State of Modernization From ABI MQ References

n = 1359, 2018 Analytics and BI Magic Quadrant Reference Survey

# The State of Modernization From ABI MQ References — Latin America

n = 1359, 2018 Analytics and BI Magic Quadrant Reference Survey  
n = 49, Latin America

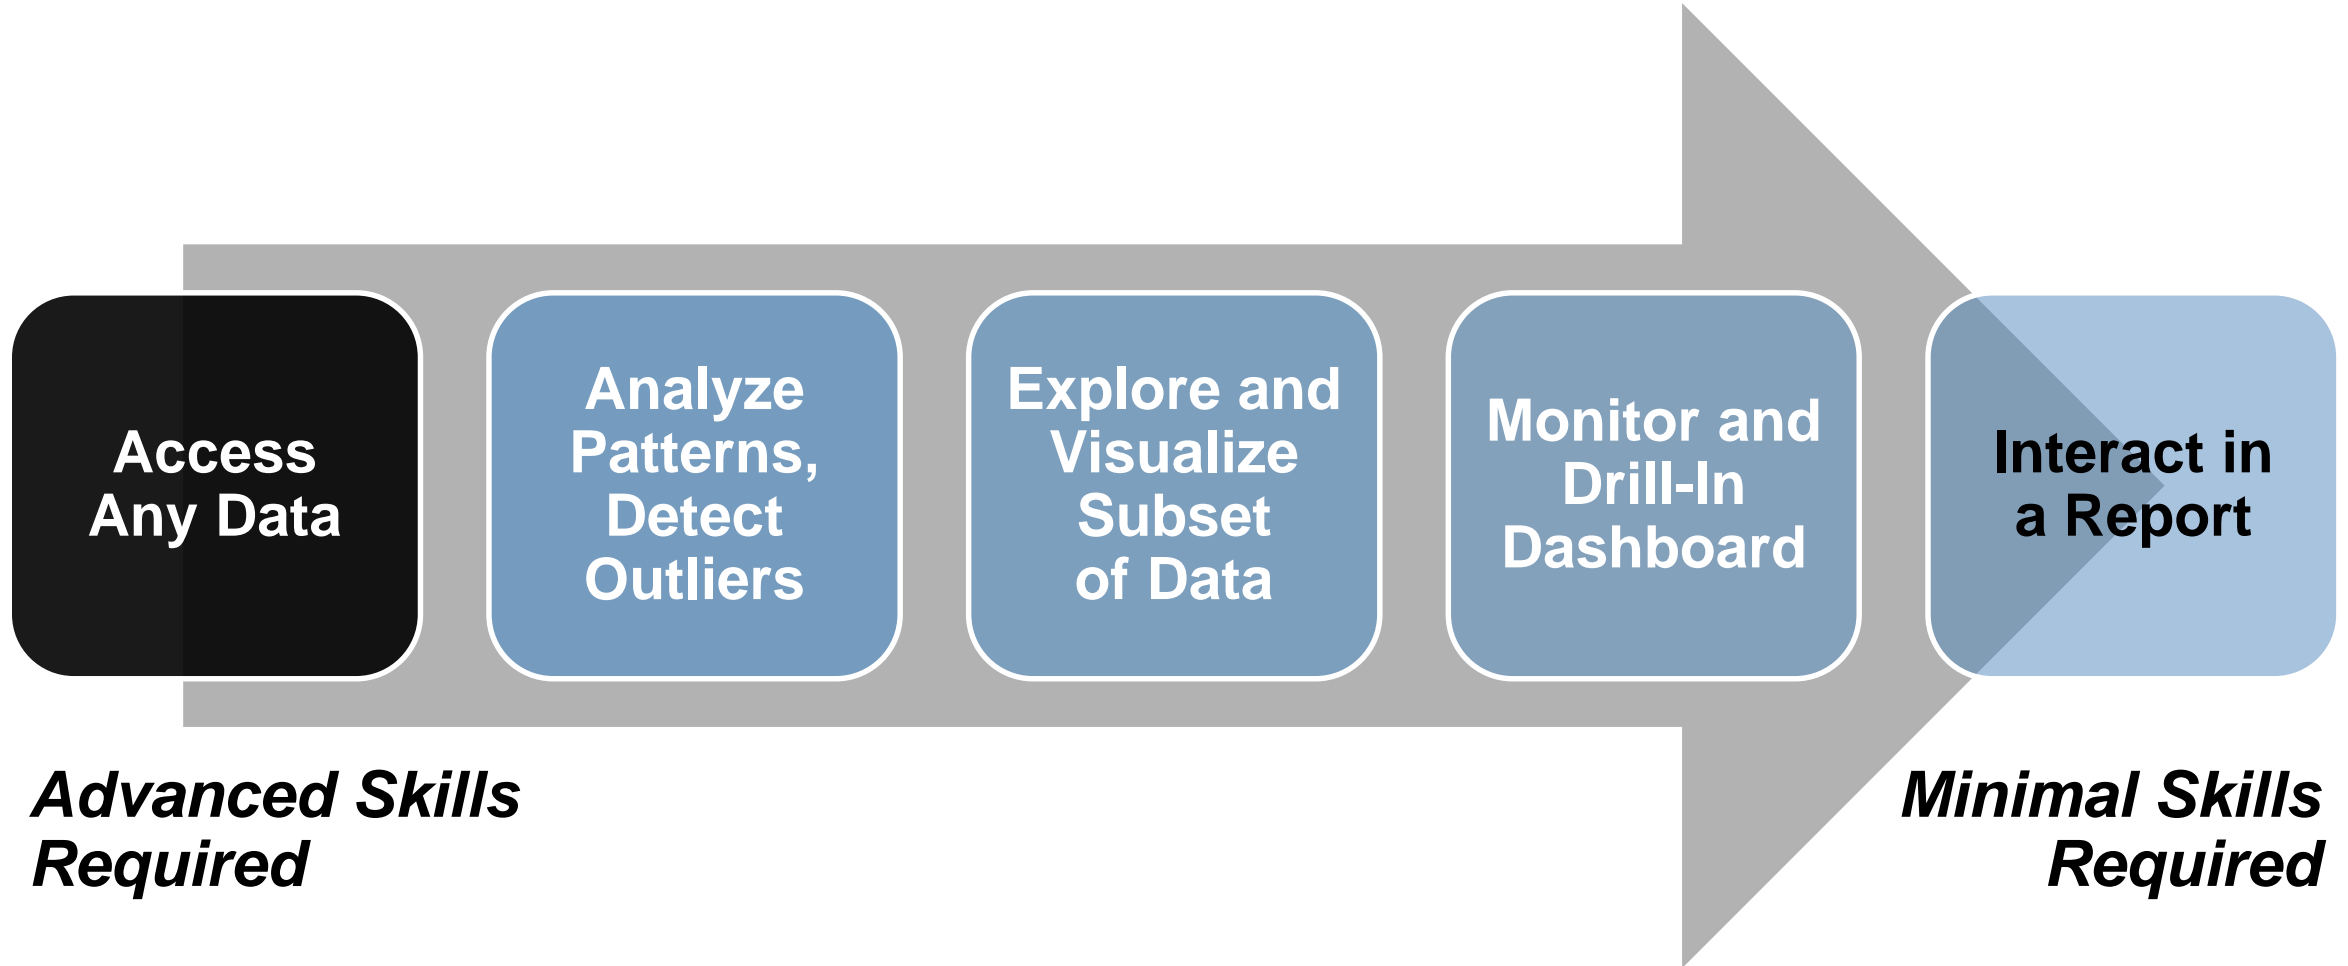

# Key Issues

1. How is modern analytics and BI different from traditional BI?
2. What are the market trends?
3. What are the impacts on technology, roles and design choices?

# Steps to Modernization

1. Upgrade or augment the technology
2. Shift in roles and responsibilities:
  - But only if skills-ready
3. Shift of where and how you do the data modeling:
  - Data warehouse, data lake, analytic tool

# Self-Service Analytics and BI Continuum

# Self-Service Analytics and BI Continuum: Users Not Ready and Fearful of Change

***Advanced Skills  
Required***

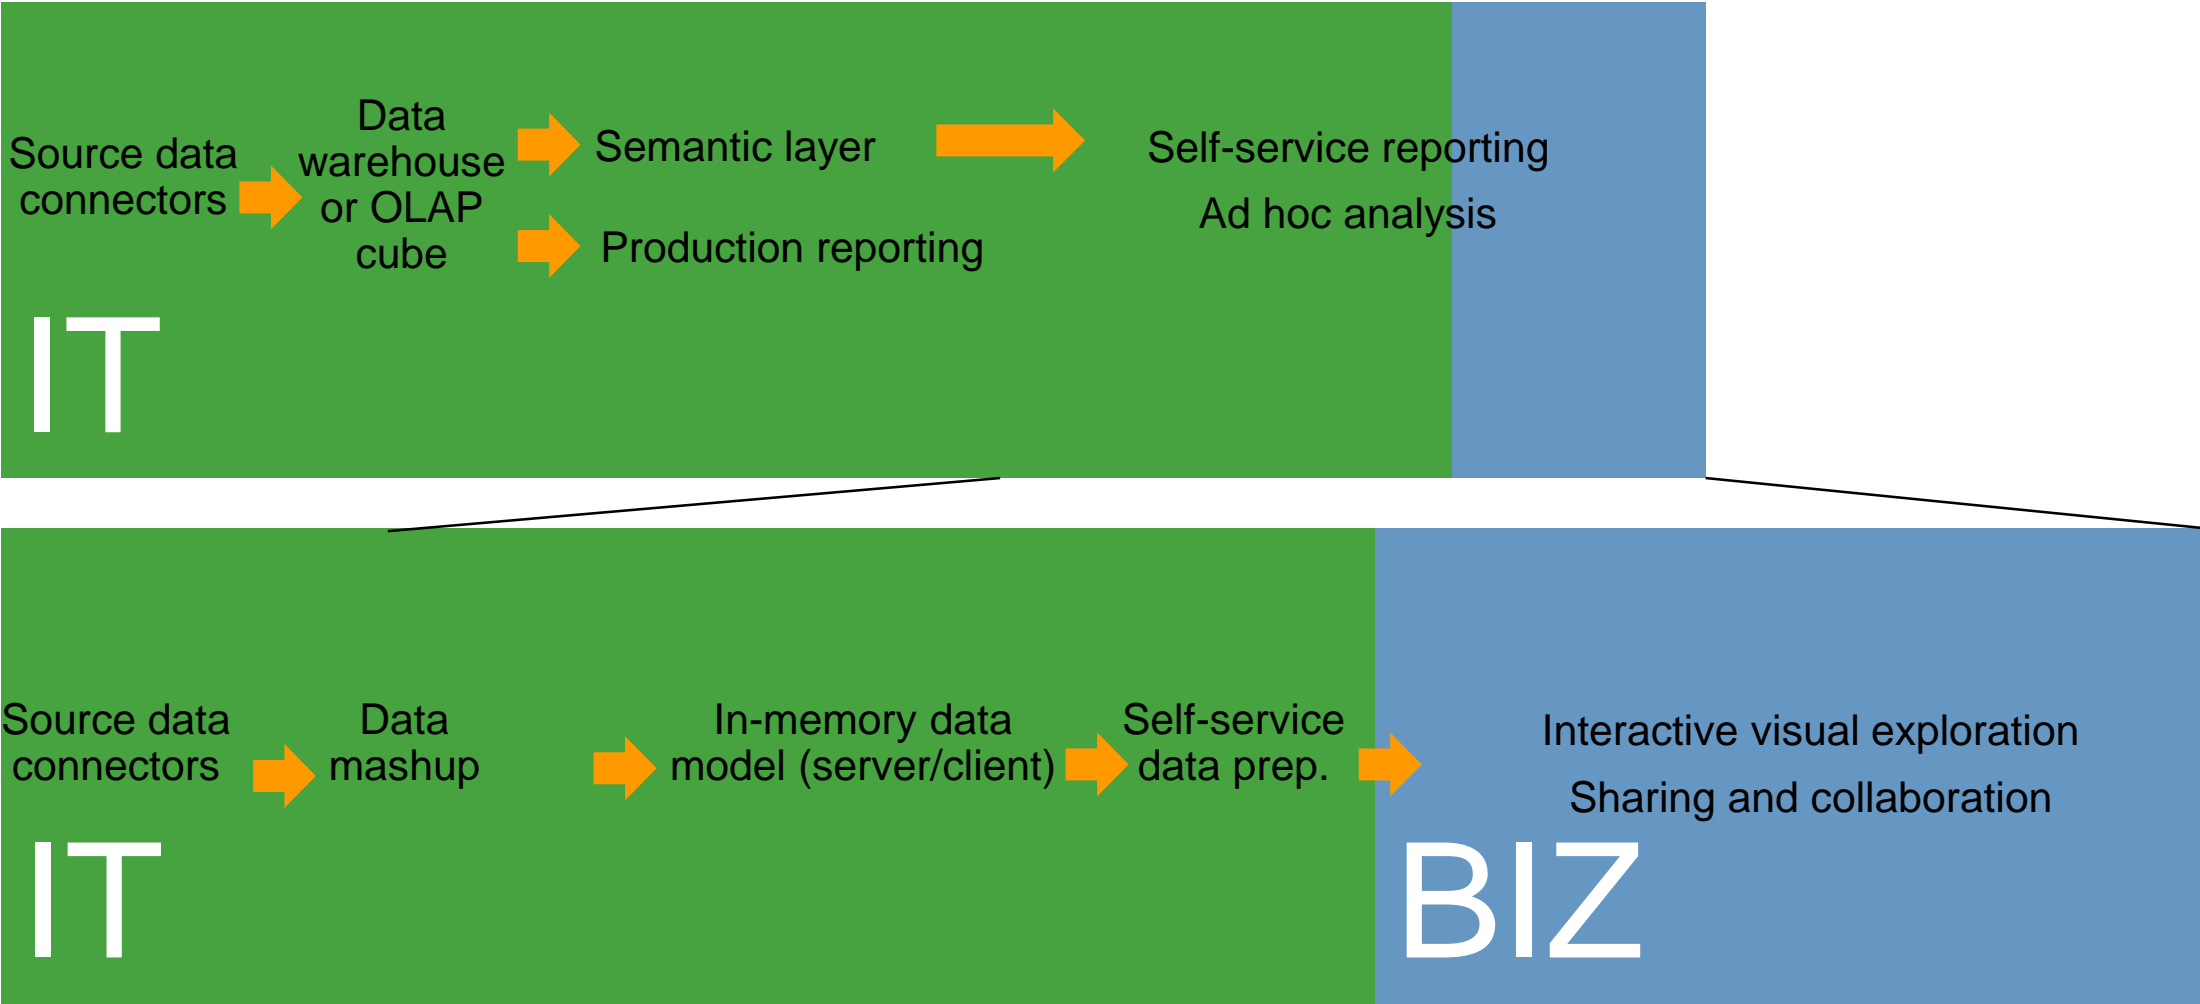

***Minimal Skills  
Required***

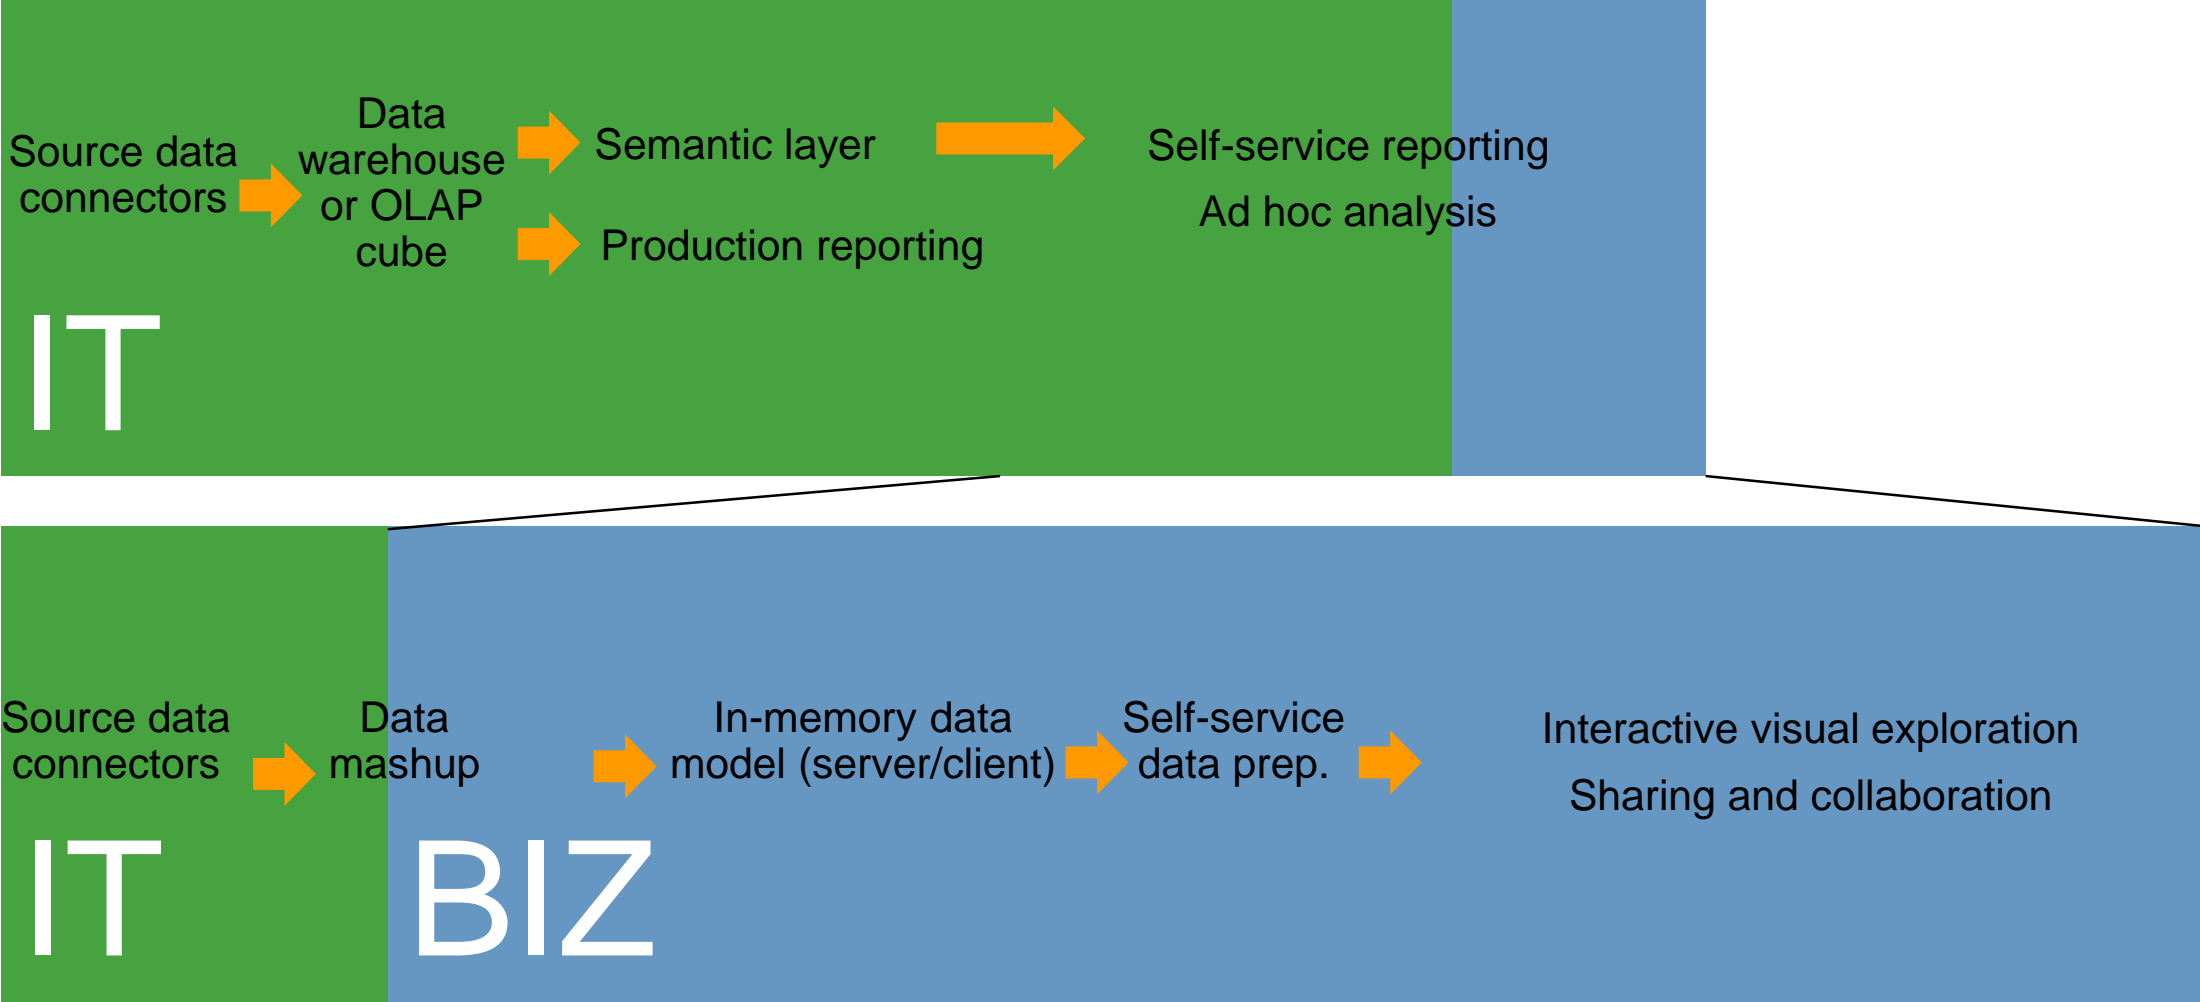

## Invest in Data Literacy

# Modernization: Shift in Roles and Responsibilities

# Modernization: Shift in Roles and Responsibilities

**Drive**

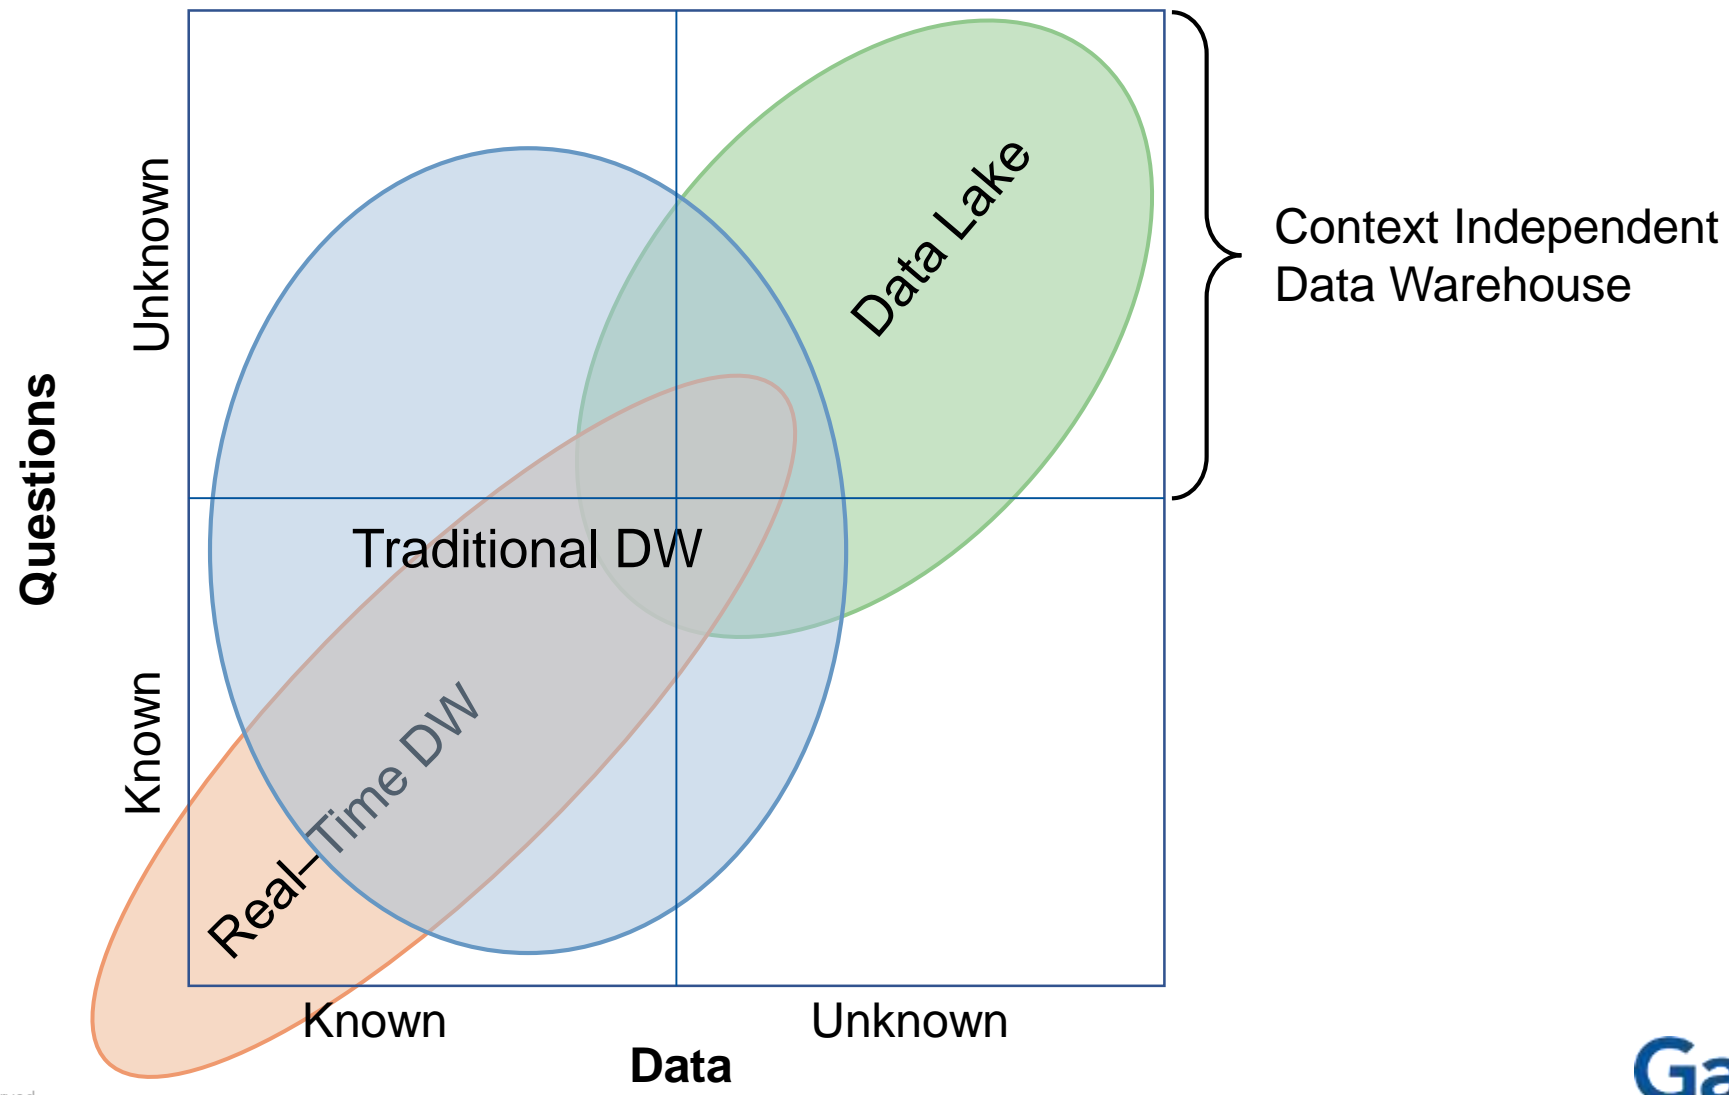

# Evolve to Self-Service Analytics and BI

# Re-assess Design Choices Based on Predictability of Questions and Data

# Re-assess Design Choices Based on Predictability of Questions and Data

# Recommendations

- ✓ Modernize!
- ✓ Assess readiness and establish guard rails.
- ✓ Invest in data literacy.
- ✓ Clarify roles, responsibilities, governance processes.
- ✓ Leverage new technologies and design approaches based on the use case and analytic patterns.
